### For a research paper, what is a Bibliography, References, or Works Cited page? (Check all that apply):

- A list of the sources that were found when the writer researched his/her topic.
- A list that shows which sources were included and documented in the paper.
- A list that shows the page of your paper where you quoted the sources used.
- A list that shows titles of books on the same subject.

In the case below, the original source material is given along with a sample of student work. Determine if there is plagiarism in the student version.

#### Original Source Material:

The concept of systems is really quite simple. The basic idea is that a system has parts that fit together to make a whole; but where it gets complicated - and interesting - is how those parts are connected or related to each other. There are many kinds of systems: government systems, health systems, military systems, business systems, and educational systems, to name a few.

#### Student Version:

Systems, including both business systems, and educational systems, are actually very simple. The main idea is that systems have parts that fit together to make a whole. What is interesting is how those parts are connected together.
